Docket No.: 3449-0273P

1. (Currently Amended) A method for displaying a digital broadcasting, the method comprising:

displaying an audio video (AV) broadcast signal and a first data broadcast signal based on an Open Cable based broadcasting standarda first broadcasting standard;

Systems Committee) based broadcasting standard a second broadcasting standard different than the first broadcasting standard Open Cable based broadcasting standard in response to a request for a modification of the first data broadcast signal being displayed; and

displaying the tuned second data broadcast signal based on the second broadcasting standard ATSC based broadcasting standard,

wherein when the A/V broadcast signal is a first A/V broadcast signal including the first data broadcast signal, the first A/V broadcast signal is received and tuned through a first tuner,

wherein when the A/V broadcast signal is a second A/V broadcast signal including the second data broadcast signal, the second A/V broadcast signal is received and tuned through a second tuner,

wherein when the first A/V broadcast signal is received and tuned through the first tuner, a first transport packet processor connected to an output of the first tuner extracts the first data broadcast signal from the first A/V broadcast signal, and when the second A/V broadcast signal is received and tuned through the second tuner, a second transport packet processor connected to an output of the second tuner extracts the second data broadcast signal from the second A/V broadcast signal, and

2

EHC/JSH/ma

wherein a data processor connected to the first and second transport packet processors processes the corresponding first and second data broadcast signals, and an A/V processor connected to the first and second transport packet processors processes the corresponding first and second A/V broadcast signals such that any one of the first and second data broadcast signals

can be displayed together with any one of the first and second A/V broadcast signals.

2-3. (Canceled).

4. (Currently Amended) The method according to claim 1, wherein the first AV broadcast signal based on the first broadcasting standard Open Cable based broadcasting standard and the second data broadcast signal based on the ATSC based broadcasting standard second broadcasting standard are simultaneously displayed on one screen in a picture in picture (PIP).

5. (Currently Amended) A digital broadcasting display method comprising:

receiving and tuning at least one of a first and second audio/video (A/V) broadcast signals through a corresponding first and second tuners, said first and second A/V broadcast signals being based on corresponding Open Cable based broadcasting and ATSC (Advanced Television Systems Committee) based broadcasting standards first and second broadcasting standards that are different from each other;

extracting first and second data broadcast signals from the first and second A/V broadcast signals via first and second transport packet processors connected to the first and second tuners, respectively;

3 EHC/JSH/ma

Docket No.: 3449-0273P

processing the first and second A/V broadcast signals with an A/V processor connected to the first and second transport packet processors;

processing the first and second data broadcast signals with a data processor connected to the first and second transport packet processors; and

displaying any one of the first and second A/V broadcast signals with any one of the first and second data broadcast signals

6-7. (Canceled).

- 8. (Currently Amended) The method according to claim 5, wherein the first AV broadcast signal based on the first broadcasting standard Open Cable based broadcasting standard and the second data broadcast signal based on the ATSC based broadcasting standard second broadcasting standard are simultaneously displayed on one screen in a picture in picture (PIP).
 - 9. (Currently Amended) A digital broadcasting display method comprising:

tuning first and second audio/visual (A/V) broadcast signals based on different first and second broadcasting standardsOpen Cable based broadcasting and ATSC (Advanced Television Systems Committee) based broadcasting standards, the first and second A/V broadcast signals being received and tuned through first and second tuners, respectively;

4 EHC/JSH/ma

extracting first and second data broadcast signals from the first and second A/V broadcast signals via first and second transport packet processors connected to the first and second tuners, respectively; and

displaying, via a display unit connected to the first and second transport packet processors, any one of the first and second A/V broadcast signals with any one of the first and second data broadcast signals.

10-12. (Canceled).

- 13. (Previously presented) The method according to claim 9, further comprising tuning the second broadcast signal received through the second tuner in response to a request for a modification of the first and second A/V broadcast signals being displayed.
- 14. (Previously presented) The method according to claim 9, wherein the first A/V broadcast signal tuned by said first tuner and the second data broadcast signal received through said second tuner are simultaneously displayed on one screen in a manner of picture in picture (PIP).
- 15. (Currently Amended) An apparatus for displaying a digital broadcast signal, the apparatus comprising:

at least first and second tuners configured to selectively tune first and second audio/video (A/V) broadcast signals received according to different Open Cable based broadcasting and

ATSC (Advanced Television Systems Committee) based broadcasting standardsfirst and second

broadcasting standards, respectively;

first and second transport packet processors respectively connected to the first and second

tuners and configured to extract first and second data broadcast signals from the first and second

A/V broadcast signals;

an A/V processor connected to the first and second transport packet processors and

configured to process the first and second A/V broadcast signals;

a data processor connected to the first and second transport packet processors and

configured to process the first and second data broadcast signals; and

a controller connected to the first and second transport packet processors and configured

to display on a display any one of the first and second data broadcast signals with any one of the

first and second A/V broadcast signals in response to a request from a user.

16-19. (Canceled).
